-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

1. This action is in response to applicant's remarks received on 02/23/06.

#### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 58-63 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boone et al. in view of Yokota.

Boone et al. discloses (Fig. 1-8) the invention substantially as claimed including a chassis 12, a detection system (col. 2, lines 67 and 68) responsive to an absence of paper in the feed mechanism, a transfer mechanism having a transfer bar 74 and a transfer link 78; an actuator 31 and a spring 76. Boone et al. does not show a control means and a motor. However, Yokota teaches the use of a control means 16 (see Fig. 5) and a motor 14 for the purpose of detecting automatically absence of the product. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Boone et al. by providing the control means and the motor as taught by Yokota in order to obtain device that detects automatically absence of the product.

***Response to Arguments***

4. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Haasen et al., Robinson and Formon et al. are cited to show related device.
